

WHATEVER YOUR NEED - TURF OR SEED

Jubilee Utility

Our popular Jubilee Utility is a standard quality multi-purpose utility grass which can be grown in most conditions. A mixture of dwarf ryegrass and red fescue, Jubilee Utility provides a versatile, fast-establishing, extremely hard-wearing and low maintenance sward.

Jubilee Utility gives a medium texture and standard thickness, with good shoot density. It will keep its excellent mid to dark green colour all year round. It cuts cleanly, recovers rapidly from wear and has good disease resistance. Quick germinating seeds produce a rich green sward and the turf will root quickly once laid.

Jubilee Shady

Jubilee Shady is formulated to grow in challenging conditions and gives outstanding results just about anywhere. The combination of red fescue and meadow grass means that it copes well in areas of lower light intensity and associated stress problems of dry compacted soil and lower nutrient availability. It also performs well under full sun.

Ryegrass free, it provides good shoot density with excellent visual appeal and performs superbly throughout the year, maintaining its rich colour over winter. It recovers quickly from wear and has good disease resistance.

Jubilee Celebration

A bright and colourful wildflower mixture of native perennial and annual wildflowers and grasses, Jubilee Wildflowers emulates a traditional old fashioned hay-meadow. We include annual species in the mixture to give an exceptional show of vivid colour, all of them native to the UK, in a proportion of 25% flowering plants and 75% grasses.

The Celebration Turf can be allowed to grow and flower unchecked throughout spring and summer and cut back when finished around August, mowing periodically in autumn and winter to keep it neat. Celebration turf arrives with around 75% coverage of wildflowers and grasses already growing strongly and ready to root into prepared soil. These will very quickly establish into a lush sward.

Jubilee Prestige

A ryegrass free mixture of fescues, Jubilee Prestige can be utilised anywhere and produces an impressive fine leafed and dense sward for a smooth, lush lawn or golf courses and bowling greens of the highest quality.

Jubilee Prestige performs well throughout the year, with good disease resistance and tolerance to wear and tear and very close mowing. Being a premier product, it does require regular, skilled maintenance to keep it in prime condition.

Jubilee Bespoke

Jubilee Bespoke is a seed mixture tailored to your particular specifications. It might be that you need to incorporate a certain species to help cope with a particular soil type, or grow grass on a more challenging marshy, acidic or sandy area.

It might be that you need a sward that is especially tolerant of close mowing, or conversely you may require natural-looking grassland that requires minimal or zero maintenance. Perhaps you need an open textured sward for the establishment of wild flora in a conservation area, or an area of grass that will be less affected by continuous exposure to direct sunshine, or else a mixture with especially deep roots to cope with serious drought conditions.

We can create any mixture that will cover all your needs.
